SUMMARY

Full Stack Developer with 9 years of experience building and scaling enterprise SaaS applications across PHP/Laravel/Vue.js and Python/Flask stacks. Strong across the full SDLC: REST API design, configurable workflow and form-builder systems, Single Sign-On, performance optimization, and production support. Moves comfortably between backend services, responsive front ends, and automation, with a track record of shipping reusable components that speed up delivery across teams. Uses Claude Code to accelerate UI development, refactoring, and debugging, shipping features faster without sacrificing code quality.

TECHNICAL SKILLS

Languages: PHP, JavaScript, Python

Backend & Frameworks: Laravel, Flask, REST APIs, MVC, OOP, service-oriented architecture

Frontend: Vue.js, HTML5, CSS3, responsive design

Databases: MySQL, MongoDB

Auth & Integration: Single Sign-On (SSO), OAuth, JSON

Practices: Unit testing, code reviews, Agile/Scrum, SDLC, production support, performance tuning

Tools & Scripting: Git, Linux, Shell & PowerShell scripting

AI-Assisted Development: Claude Code and prompt engineering for rapid UI development, code refactoring, debugging, and productivity gains

EXPERIENCE

Full Stack Developer

April 2019 – Present

Tapclicks Software India Pvt. Ltd., Hyderabad

- Delivered core modules of enterprise SaaS products used by [20 orgs/users], spanning configurable form builders, workflow automation, and task management.
- Designed and shipped REST APIs and reusable Laravel/Vue.js components that reduced duplicated code and cut feature-delivery time across [30] modules.
- Adopted Claude Code to accelerate delivery, building and iterating on Vue.js UIs and refactoring legacy code in a fraction of the usual time while maintaining code quality.
- Implemented secure Single Sign-On (SSO) enabling centralized, one-login access across the product suite.
- Improved application performance through backend refactoring and MySQL query tuning, reducing [report/page] load time by [75%].
- Partnered with Product, QA, and cross-functional teams through sprint planning, code reviews, and deployments; owned production support for Marketplace Project.

Software Analyst (Contract)

October 2018 – March 2019

Verizon (payroll: TechStar Group Inc. Pvt. Ltd.), Hyderabad

- Built automation scripts in Python and Robot Framework for enterprise application testing.
- Executed functional, regression, and manual testing; authored test scenarios, traceability matrices, and test data.
- Enhanced the automation framework and worked with development teams to track and resolve defects.

Software Developer

January 2017 – September 2018

TechStar Group Inc. Pvt. Ltd., Hyderabad

- Built enterprise web applications and REST APIs using Python and Flask, backed by MongoDB data models.
- Developed Shell and PowerShell scripts to automate installation, deployment, and production support.

KEY PROJECTS

AdFlo — End-to-End Campaign & Workflow Management Platform

Full Stack Developer | Team: 12–15 | PHP, Laravel, Vue.js, MySQL, REST APIs

AdFlo lets media companies and agencies run their entire campaign workstream in one platform, spanning presale (AI proposal builder with a recommendation engine), execution (campaign setup, workflow automation, and push integrations with Google Ads, Facebook, and Salesforce), and reporting & analytics. Built on a configurable Order → Line Item → Flight model.

- Built the configurable Form Builder (dynamic field types, validations, reusable field groups, layouts), letting customers tailor business processes without code changes.
- Developed the Orders, Line Items, Flights, Task Management, and Workflow Management modules end to end.
- Implemented workflow automation for approvals, validations, notifications, and status transitions.
- Optimized MySQL queries and backend services to improve scalability under [request/data volume].

TapMarketplace — Centralized Product Marketplace

Full Stack Developer | Team: 4 | PHP, Laravel, Vue.js, MySQL, REST APIs, SSO

Centralized marketplace for discovering enterprise products, with secure SSO access and automated owner notifications, built on a multi-tenant architecture, the first of its kind at TapClicks.

- Delivered end-to-end marketplace development as one of a four-person cross-functional team.
- Helped build TapClicks' first multi-tenant architecture, enabling isolated, scalable access for multiple organizations on a shared platform.
- Implemented secure SSO authentication and product catalog, listing, and detail management.
- Built an automated notification system that alerts product owners when users express interest in a product.
- Developed REST APIs and reusable Vue.js components for maintainability and scale.

HAWK — Infrastructure Monitoring Platform

Software Developer | Team: 8 | Python, Flask, MongoDB, Linux, Shell/PowerShell

- Built Python services to collect server metrics across Linux and Windows environments.
- Developed Flask REST APIs for server monitoring, performance analysis, and comparative reporting.
- Designed MongoDB schemas and Shell-based installation and deployment scripts.

iVapp — Verizon

Software Analyst | Team: 20 | Python, Robot Framework, MongoDB

- Developed Robot Framework automation scripts and performed manual and regression testing.
- Authored test cases, test data, and traceability matrices.

EDUCATION

B.Tech, Computer Science & Engineering	2015
<i>SR Engineering College, Warangal</i>
